Retrieving Information

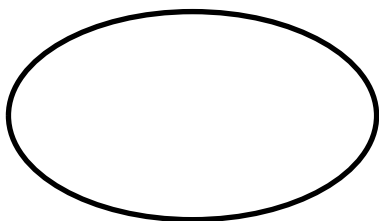

There are many ways to retrieve information from a database. One way is to use a query language like SQL. Another way is to use a graphical user interface (GUI) like a web browser. A third way is to use a command-line interface (CLI) like a terminal. Each method has its own advantages and disadvantages. For example, SQL is powerful but can be difficult to learn. GUIs are easy to use but can be slow. CLIs are fast but can be difficult to use.
